### EXPERIENCE

Mr. Thompson formed JET Engineering as a sole proprietorship in May of 2008. Since the company's formation, some of his primary responsibilities have included management of all levels of business functions for JET Engineering. Mr. Thompson has over 25 years of experience in Public Works Administration, design of Residential and Commercial developments, as well as construction and permit processing. Jim's current responsibilities include consultation with clients, project management, design oversight and quality assurance, resource allocation, schedules monitoring and budgeting, as well as coordination with agencies and utility companies for all of the firm's projects.

Prior to forming JET Engineering, Mr. Thompson helped found Page Mill Services, a leading investment, development and property management firm in Palo Alto. One of Mr. Thompson's many primary responsibilities included management of all development activities for investments handled by Page Mill Services. The Firm's investments have included commercial office, hospitality, retail, industrial, mixed use, land and residential assets in California and throughout the United States. Jim oversaw and managed a staff of approximately 10 people in the corporate division for investment acquisitions, and 80 people in various divisions of the management operations group of Page Mill Properties.

Prior to joining Page Mill Services, Mr. Thompson was a Vice-President of HMM Engineers and in charge of the Urban Design Division where some of his responsibilities included client consultation, project management, design oversight, quality assurance, resource allocation, project schedules and budgeting, as well as coordination and processing of permits with agencies and utility companies. Jim specialized in the design of major transportation and infrastructure projects such as railway grade separations, arterial roadway improvements, international airports, as well as project management of municipal engineering and facilities construction. Areas of expertise included: roadway design, utility design, pump station design, storm, sanitary sewer and water system design, flood plain analysis, and master planning.

Prior to that, Mr. Thompson served as the Director of Public Works and City Engineer for the City of Brisbane for 8 years, and 2 years as contract City Engineer. His duties included but were not limited to developing an operational department whose functions included design, operation and maintenance of all public facilities within the incorporated city limits, including being the District Engineer for the Guadalupe Valley Municipal Improvement District, and the Sierra Point Marina. Mr. Thompson's responsibilities included establishing short and long-term goals for the department, budgets, Capital Improvement Program, and processing of development proposals including the issuance of permits.
